HighRadius Overview

HighRadius Corporation is a provider of Financial Supply Chain Management (FSCM) software solutions to optimize receivables functions such as credit, collections and deductions. HighRadius solutions enable companies to lower Days Sales Outstanding (DSO), minimize write-offs and reduce operating costs. HighRadius products and services are adopted by leading companies.

HighRadius software has a unique delivery model that does not require independent enterprise software deployment and operation. The software is offered either via the cloud as hosted Software (SaaS model) or as a plug-in that gets imported into large scale ERP system such as SAP and complements its existing functionality.

Corporate Recognition

HighRadius Corporation was recognized as one of the fastest growing technology companies in Houston for the second consecutive year. The Fast Tech 50 awards were presented to 50 Houston-based high-tech companies that experienced the greatest revenue growth percentage year-over-year. HighRadius was ranked 27th with an annual revenue growth of 43% in 2009. HighRadius was ranked 5th on FastTech 50 in 2008. HighRadius also received Paul Frison Acceleration of the year award recognizing it as the fastest growing young company in Houston area.

HighRadius Financial Supply Chain Management

POD & Claims Automation enables companies to significantly improve their receivables financial performance by completely automating the process of retrieving documents such as Proof-of-Delivery (POD), Bill of Lading (BOL), customer Debit Memos/Claims and scanned check copies from various websites without requiring any human intervention.

Dispute Resolution enables standardization and enforcement of deduction processes by providing deep cross-department collaboration via automatic dispute case routing and processing.

Cash Application enhances the ERP lock box functionality by increasing the on-invoice hit rate by auto-matching open payments to invoices based on additional reference numbers.

Credit Memo Approval automates the process of creating and approving credit memos electronically. The solution has the capabilities to configure hierarchical approval levels as a function of amount, reason-codes etc.

Credit Debit Matching is a rules based engine that systematically operates on transaction data to mass match and reconcile credits and debits based on pre-configured matching criteria.

Correspondence Automation enables outbound customer communications related document generation and delivery directly from ERP via fax, email or print.

Benefits

- Control Order-to-Cash discrepancies.
- Reduce bad debt write-offs.
- Enhance user productivity by 20-40%.
- Reduce Days Sales Outstanding (DSO) by speeding up repayment.
- Recover additional dollars due to proactive deduction resolution and settlements.
- Audit trail for benchmarking the performance of the users and processes.
