

Integrated Receivables Platform For Banks

Payments Hub

The HighRadius Payments Hub enables banks to offer a single platform for enterprise clients to achieve a holistic view of all incoming receivables including all electronic and paper-based transactions, across all sources and banks. The integration of payment information from the lockbox, Remote Deposits, ACH, Wire payments, Credit Cards or Mobile payments, into a unified payment stream eliminates the need for managers to look into disconnected sources of data for reporting and decision-making.

About The Solution

As incoming payment volumes continue to grow, treasury and receivables teams are always looking to achieve a single-source view on all incoming receivables. However, the increasing volume of payments is received through an ever-increasing number of payment sources including checks, deposits and the growing electronic payment formats including ACH, credit cards, Wire transfers and mobile payments. A user-friendly portal with a real-time, integrated view of all received payments could help teams save countless hours lost in pulling outdated information across different data sources and achieve accurate historical tracking of payments.

Why Enterprise need Payments Hub

- **User-friendly web experience**
Bank-branded, user-friendly portal with easy-to-access payment information
- **Integrate multiple payment streams**
Consolidate payment information from the lockbox, deposits, ACH, Credit Cards, Wire payments and mobile payments
- **Consolidate payments across all banks**
Payments Hub is able to capture all payment formats across all banks and provide a holistic view of all incoming receivables
- **Enterprise level visibility**
Single-source-of-truth of all current and historical payment information to share with all stakeholders
- **High-fidelity search and indexing**
Filtered search with perpetual index of all payments across all sources
- **Reporting and Analytics**
Out-of-the-box reports for review and exportable data for advanced analytics or reconciliation

Key Features

- Compatible with all incoming payment file formats
- Highly-scalable data repository capable of housing virtually infinite payment history
- Auto-identification of key payment fields for multi-field indexing
- Out-of-the-box reports for faster reporting
